Serial No. 443,300

- 1. The drawings are objected to because in Figures 1 and 2 the numeral "1" denotes two different elements; and the rectangular boxes must be labeled in compliance with 37 CFR 1.83(a). Correction is required.
- The disclosure is objected to because of the following informalities: In line 7 on page 2, in lines 6 and 8 on page 3, in line 13 on page 4, and in line 7 of claim 1, "round" should be --around--; in line 22 on page 2, a comma should be inserted at the end of the line; on pages 5 and 7-11 the numeral "1" refers to two different elements; on page 9, in line 10, "1]" should be --11--; in line 18 the sentence is incomplete; and in lines 22 and 23, "Lij and Loj" should be --LIJ and LOJ--; on page 12, in line 10, "LL" should be --11--, and in line 22 the sentence beginning therein is incomplete; and on page 13, in lines 4 and 7, each occurrence of "Lhn" should be LHn--, and in lines 6 and 7, "Lhd" should be --LHd--. Also, throughout the specification and claim, the inked in inserts or changes have not been initialed and are required to the inserted by amendment.

Appropriate correction is required.

3. Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which the applicant regards as the invention.

In line 10 reference to "the missile roll axis" has no positive antecedent basis, since a roll axis of the missile has not been previously claimed.

DECLASSIFIED BY ORIGINATING AGENCY

4. The following is a quotation of 35 U.S.C. 103 which forms the basis for all obviousness rejections set forth in this Office action:

A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

- 5. Claim 1 is rejected under 35 U.S.C. 103 as being unpatentable over Linscott et al in view of Gauggel. Linscott et al disclose a rolling missile with a target tracker having a restricted field-of-view and signal processing means between the tracker and control members on the missile for directing the missile to a target. Gauggel teaches the use of signal limiting means between the tracker and control members limiting the tracker signal between two values. To employ the teachings of Gauggel on the missile of Linscott et al is considered obvious to one having ordinary skill in the art.
- 6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The patent to Dixon et al is cited as of interest to show a missile guidance system.
- 7. Any inquiry concerning this communication should be directed to Charles T. Jordan at telephone number 703-557-2894.
